What is a Preventive Health Screening?

Preventive health screenings help people understand their risk for developing chronic conditions **before** symptoms are present, while they can still take action.

Why Choose Life Line Screening for Preventive Health Screenings?

In general, a Health Screening can be different depending on the scope of the procedure.

For Life Line Screening, we screen for Stroke and Cardiovascular Disease risk with the goal of generating peace of mind or early detection.

80% of stroke and heart disease can be preventable –American Heart Association

What's included?

Abdominal Aortic Aneurysm (AAA)

Ultrasound is used to screen for the existence of an aneurysm (enlargement) in the abdominal aorta that could lead to a ruptured aortic artery.

Carotid Artery Screening (Plaque)

Ultrasound evaluation of the carotid arteries that screens for buildup of fatty plaque — one of the leading causes of strokes.

Peripheral Arterial Disease Screening

Uses ultrasound and blood pressure measurements to check for peripheral arterial disease (plaque build-up) in the lower extremities.

Atrial Fibrillation

A quick and easy test using a 6-lead EKG designed to identify Atrial Fibrillation. Electrodes are placed on the arms and legs. Atrial fibrillation increases the risk of stroke by 5 times.

Osteoporosis Risk

An ultrasound measurement of the shin bone to determine abnormal bone mass density.
